RACE-WINNING DESIGN AND PERFORMANCE

The RC10 started as the vision of Team Associated's founder Roger Curtis (RC) and became one of the most iconic RC cars in history.

In celebration of the 30th anniversary of the original RC10 we are proud to bring to you the RC10 Classic kit, a faithful reproduction of Roger's world championship winning design that changed the world of R/C off road racing forever.

The design and construction of the RC10 is totally unique to electric off-road cars, featuring a rigid alloy monocoque hub with fully adjustable suspension. Included are Associated's custom coil-over aluminum racing shocks, VariLock differential and modular 3-piece clamping wheels.

Engineered for easy assembly and maintenance, the RC10 is also easy to drive over all kinds of terrain. The rugged nylon suspension and alloy tub are tough enough to handle bumps and crashes of beginners as well as intense wheel-to-wheel action.

So buckle up and go offroad racing with the Team. The Associated RC10 is ready to take on the competition.

TEAM ASSOCIATED
RC10

Independent suspension with coil-over shocks help smooth out the bumps. Precision molded, nylon suspension components can be easily custom configured. Adjustable front design permits static camber, camber rise, caster, ride height and spring rate racing to suit every type of track.

Competition-proven 1:10 scale
radio controlled car kit.
